Mission Statement

What does success look like for this project?

Success for this project means achieving a strong course grade while also extracting meaningful insights from the dataset and interpreting the results effectively. Ideally, the project will produce work of sufficient quality and relevance to contribute to a future publication.

Meeting Management

Pre-Meeting Practices What practices will we implement prior to meetings?	In-Meeting Practices What practices will we implement in meetings?	Post-Meeting Practices What practices will we implement after meetings?	Meeting Logistics When will we meet and how (i.e., in-person or virtual)?
Before each meeting, team members will review the agenda, complete their assigned tasks in advance, and come prepared to discuss progress. Each member will also identify individual areas for improvement and take responsibility for developing them throughout the project.	During meetings, the team will review the agreed agenda, discuss completed work, and work collaboratively on coding, problem-solving, and brainstorming next steps.	After each meeting, the team will summarize key discussions, decisions, and assigned action items using the Zoom notes to ensure everyone is aligned on next steps.	The team will meet during weekdays, primarily virtually, with the option to meet in person on Fridays when needed.

Communication Platforms and Practices

Modality	Message Type What types of messages will we use each platform for?	Team Practices What practices can help us enhance each modality's effectiveness?
In-Person	Coding, brainstorming, problem solving.	Punctuality, accountability, respect, communication, constructive feedbacks.
Virtual Video, Chat, & Email	General communication through Teams and WhatsApp.	Follow-up and respond within 24 hours (not including weekends).

Expectations

Individual expectations What standards will each of us commit to in our contributions?	Team expectations What does "high-quality" work look like for our team?	Accountability What happens if we, individually or collectively, breach an expectation?
Each team member will take responsibility for their contributions, complete assigned tasks by agreed deadlines, communicate proactively if delayed, and remain open to improving their work to meet agreed-upon high standards.	High-quality work means using AI as a supporting tool rather than relying on it completely, and ensuring that our work is supported by credible references such as peer-reviewed papers and textbooks, and reviewing each other's contributions before submission.	If an expectation is breached, the team will discuss the issue openly, identify how the work or process can be improved, and support one another in addressing any challenges. It will also be documented in meeting notes and discussed as a team. If the issue cannot be resolved within the team, the instructor will be consulted. *We'll keep a shared log of contributions in case disputes arise.

Team Charter

Use this collaborative tool to define collective processes, practices, and expectations within your team.

Roles

What roles are necessary for this project (e.g., project manager), what tasks go with each role, and who will fill them?

-Coordinator (Selene): Schedules meetings, tracks the master timeline, sends agenda 24 hours in advance.

-Project Manager (Hamid): Monitors deadlines, runs weekly progress check-ins, flags blockers to the team.

-Editor (Jake): Reviews all written material for clarity, consistency, and grammar before submission.

-Reviewer (Ahenkan): Fact-checks analysis and sources, verifies methods are sound before final submission.

Presentation Lead (Ella): builds and rehearses the final presentation.

Conflict Management

How will we address disagreements within the team, and know when it's time to escalate them?

We will address disagreements through open and respectful discussion, focusing on the project goals and available evidence. If the team cannot reach a resolution after reasonable discussion, or if the disagreement begins to affect progress, deadlines, or team dynamics, we will escalate the issue to the instructor for guidance.

Keeping It Alive

How often and under what circumstances will we revisit and update our team charter?

We will revisit and update the team charter whenever conflicts arise in team schedules, expectations, or the distribution of responsibilities, and whenever changes are needed to improve collaboration and project progress.
